WMS (Warehouse Management System)

We are pleased to introduce the latest module of **Uniteam 5**, Warehouse Management System.

With the **Uniteam 5** WMS you will find an advanced set of features, functions and connectivity, meeting the latest of the modern 3PL requirements.

Our WMS module can be operated as a stand-alone module or integrated with all other modules within the **Uniteam 5** suite.

Key features:

- **Automatic posting of invoices in accounting module**
- **Transfer of details to operational modules**
- **Separate client files per warehousing client (client's client)**
- **Separate article file per client**
- **Several article/SKU identifiers such as serial no., size, model, production date, EAN-code, batch number etc.**
- **Automatic calculation and settlement of storage, handling, distribution per client**
- **Manual or automatic location control - putaway and picking algorithms**
- **Full control of return articles, damages, claims, quarantines etc.**
- **User defined definition of article levels and factors (carton, pcs., kos, cbm and many others)**
- **Enabling easy view of customer's cargo via the Web**
- **Full EDI-interface enables EDI transfer movements from/to clients and carriers**
- **Pick & Pack function (pick faces and replenishment)**
- **Advanced query and reporting facilities on all levels**
- **Scanner interface for all handling procedures (Android)**

Is this what you are looking for? Call us for a free presentation and/or workshop. Learn more about all benefits and possibilities streamlining your logistics with **Uniteam 5**.
