

## **Value-added services in addition to Uniteam TMS**

At Uniteam Group we strive to find the best solutions and partners to enhance our state-of-the-art TMS platform. There are many interesting solutions that can add value to companies using our platform and we constantly look for companies that create smart solutions to make life easier for our customers.

Over the years we have added many features like:

### **Quotes and spot rates for Air and Ocean**

- Gain direct access to SPOT rates from multiple carriers
- Allows you to easily collect, convert and digitize data on incoming price requests across all modes of transportation, i.e., Sea, Air, Road, Rail, and Express

### **Invoice Automation in the Cloud**

- Enables to swiftly capture, codify and route invoices seamlessly, securely and consistently regardless of received format
- Integration with existing financial systems to provide a seamless end-to-end process, reducing manual data entry and increasing efficiency

### **Customs Clearance**

- Across national borders data will be seamlessly transferred between systems
- High quality of data on the export paperwork will automatically create the basis of a complete import customs declaration in the recipient country

### **Track and Trace and route optimization on Road**

- Enables transport planners to build better routes and schedules and boosts fleet utilisation and overall efficiency
- Track and manage your road transport orders in real-time

### **Warehouse scanning systems**

- Digitalized your warehouse operation for improving shipping, receiving, replenishing, picking, and packaging processes
- Barcodes secure ease and speed and major business benefits include accuracy, inventory control and cost savings

These are all real-time connections we have added through our API.

Stay tuned for more interesting features coming soon.
