

As pioneers in specialised software, we deliver solutions for the global transport and logistics industry, helping you streamline your business, automate your workflow and increase your profitability!

We offer one system which has a modular structure, including our state-of-the-art Air Module. This module is fully integrated with our own Finance and Administration to simplify procedures and create financial transparency through automated invoicing and accruals.

Standard integrations and tailor-made connectivity with business partners are also available through API and EDI solutions.

- Standard built-in eAWB capability based on a regulatory framework with electronic messages leading to high data quality.
- TACT Tariffs integration to save time and improve accuracy when rating AWBs.
- CASS (Cargo Account Settlement Systems) Invoice upload system that simplifies billing and settling of accounts with all major airlines.
- Integration with airlines, authorities, vendors, customers, third parties – there are no limits.
- Our system delivers a paperless booking overview with features such as drag'n'drop to store documents on all levels, e.g. files, bookings, customers, vendors, invoices, photos, etc.

Simplicity and multi-functional reuse of data in the Air Module optimises your procedures and effectiveness.

Larger companies with more complexity have easy access to all gateways and corporate branches – including operational and financial matters.
